

How to Install **Presets in Lightroom Classic**

Lightroom Classic
versions 5, 6, & 7 through 7.3

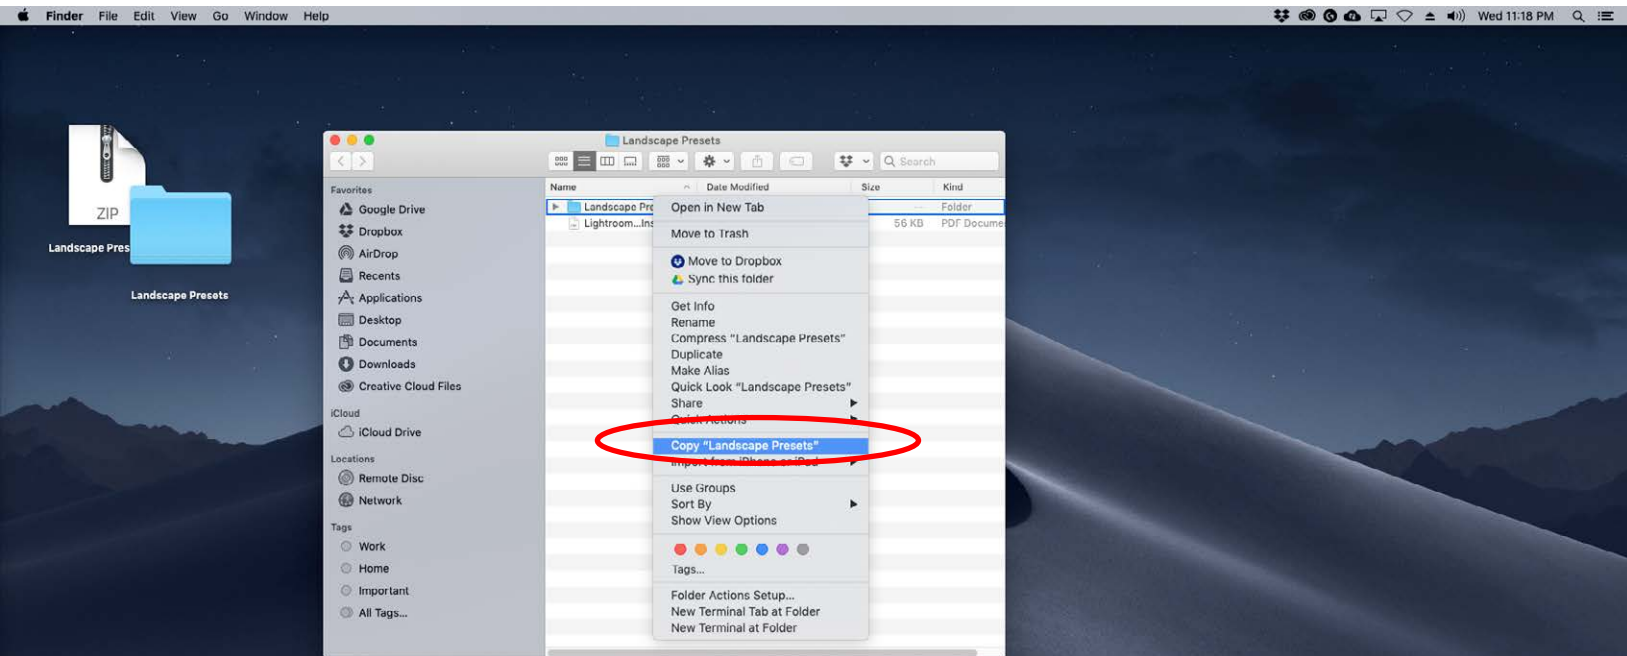

1. Download & Unzip the presets

Download the presets and unzip them.

2. Copy the folder(s)

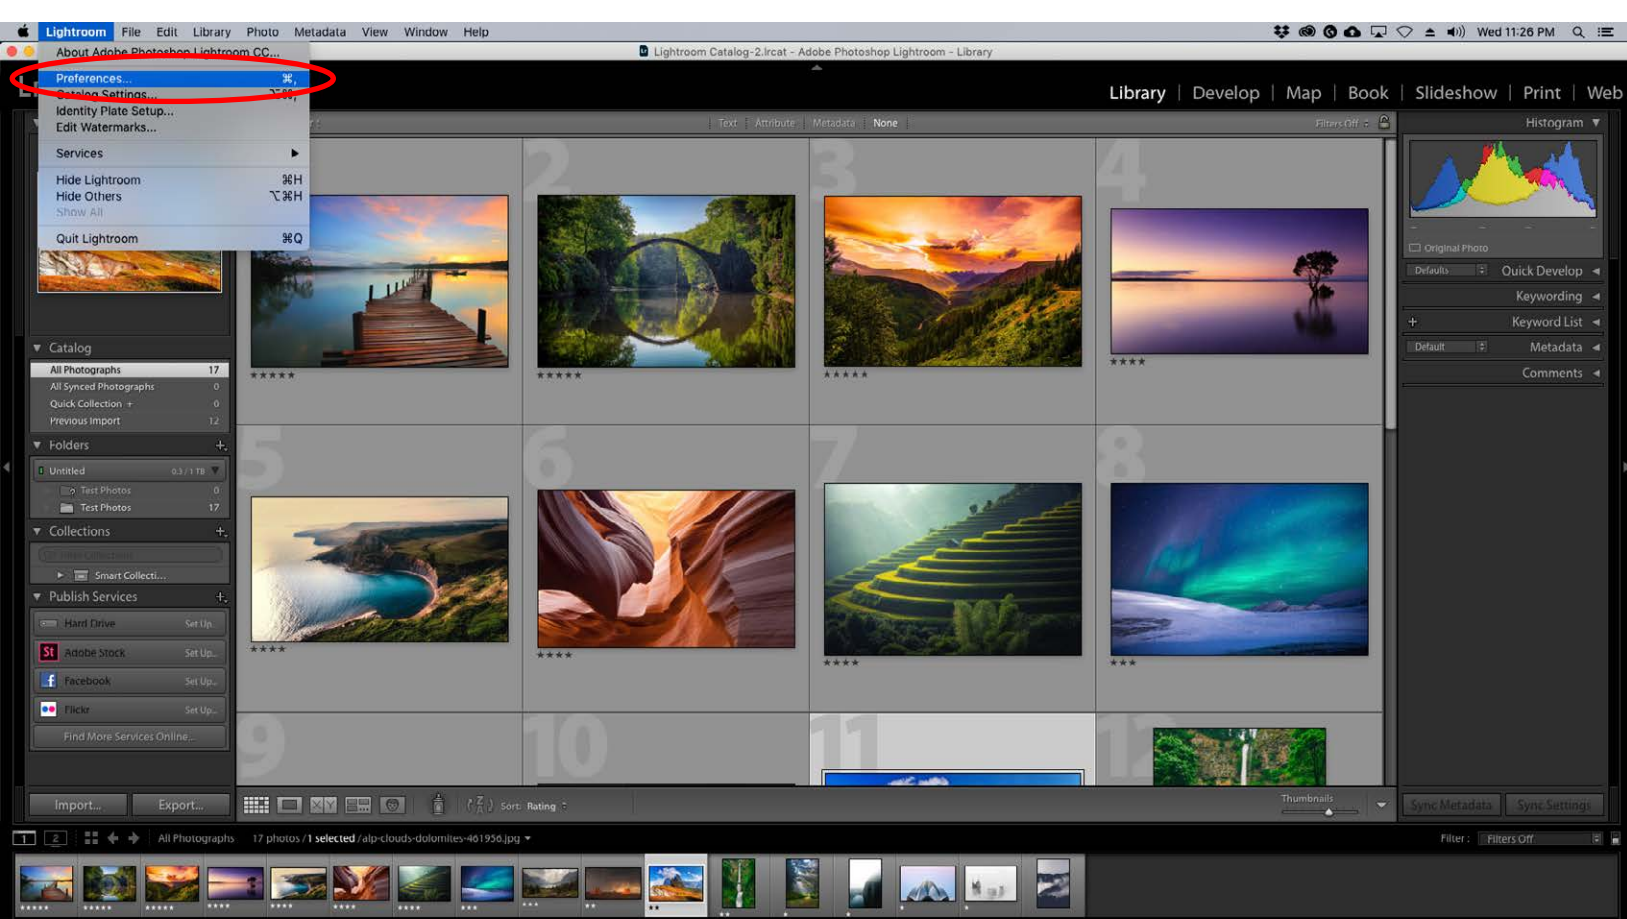

Copy the preset folder or folders you want to install so you can paste them later.

3. Go to Preferences

Mac: Click Lightroom from the menu bar in the top left and then “Preferences.”

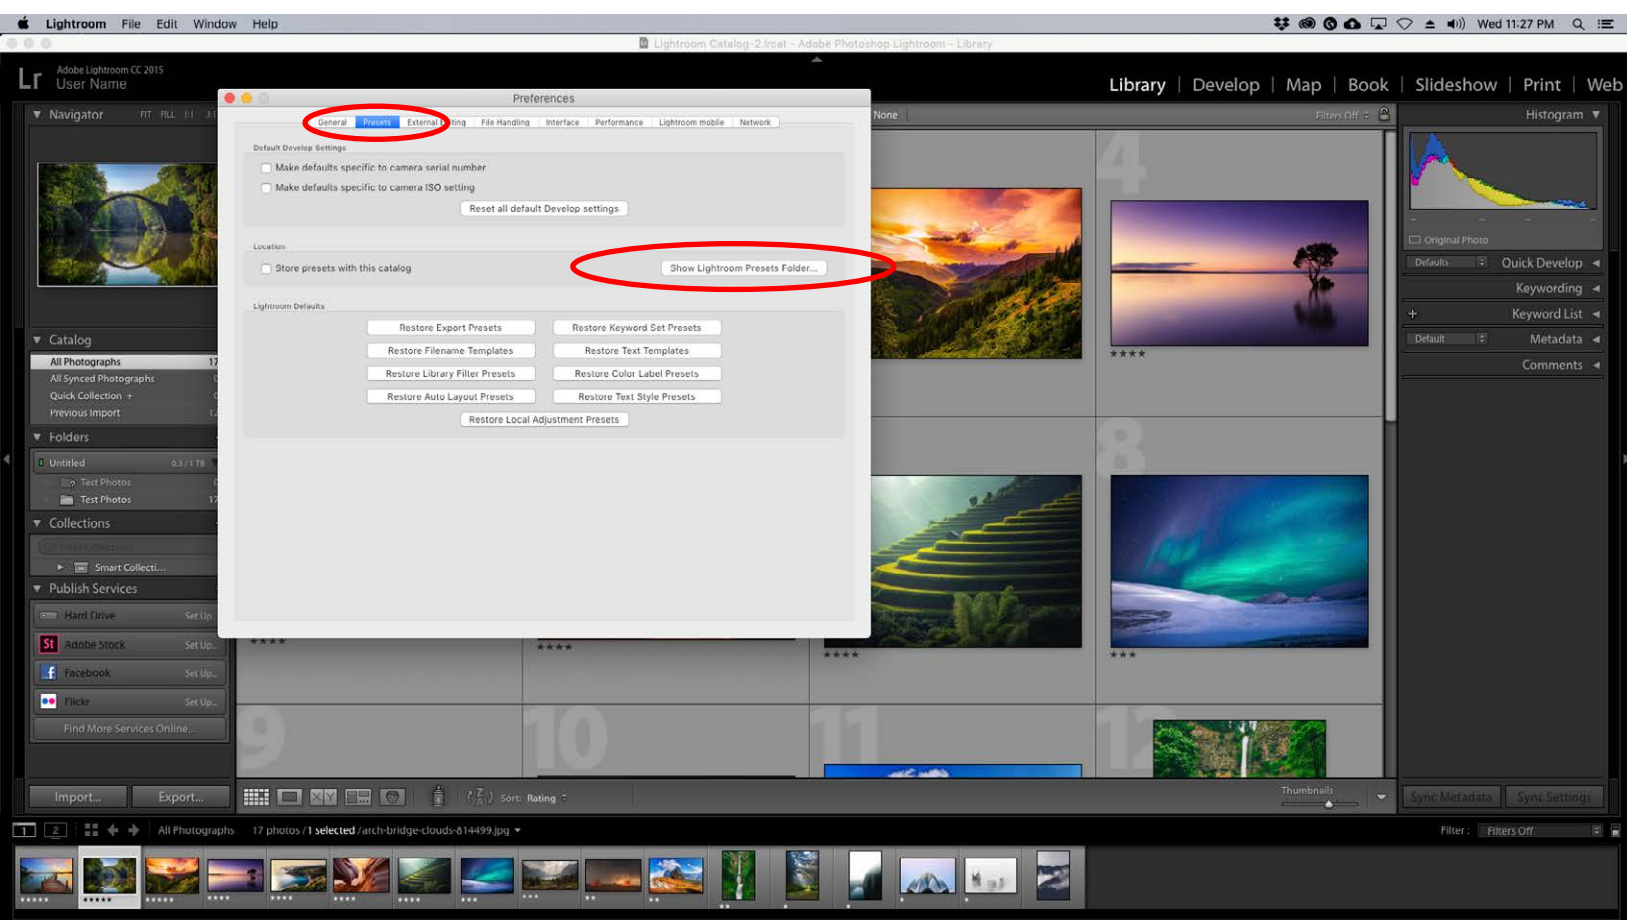

Windows: top menu bar choose Edit -> Preferences

4. Show Lightroom Presets Folder

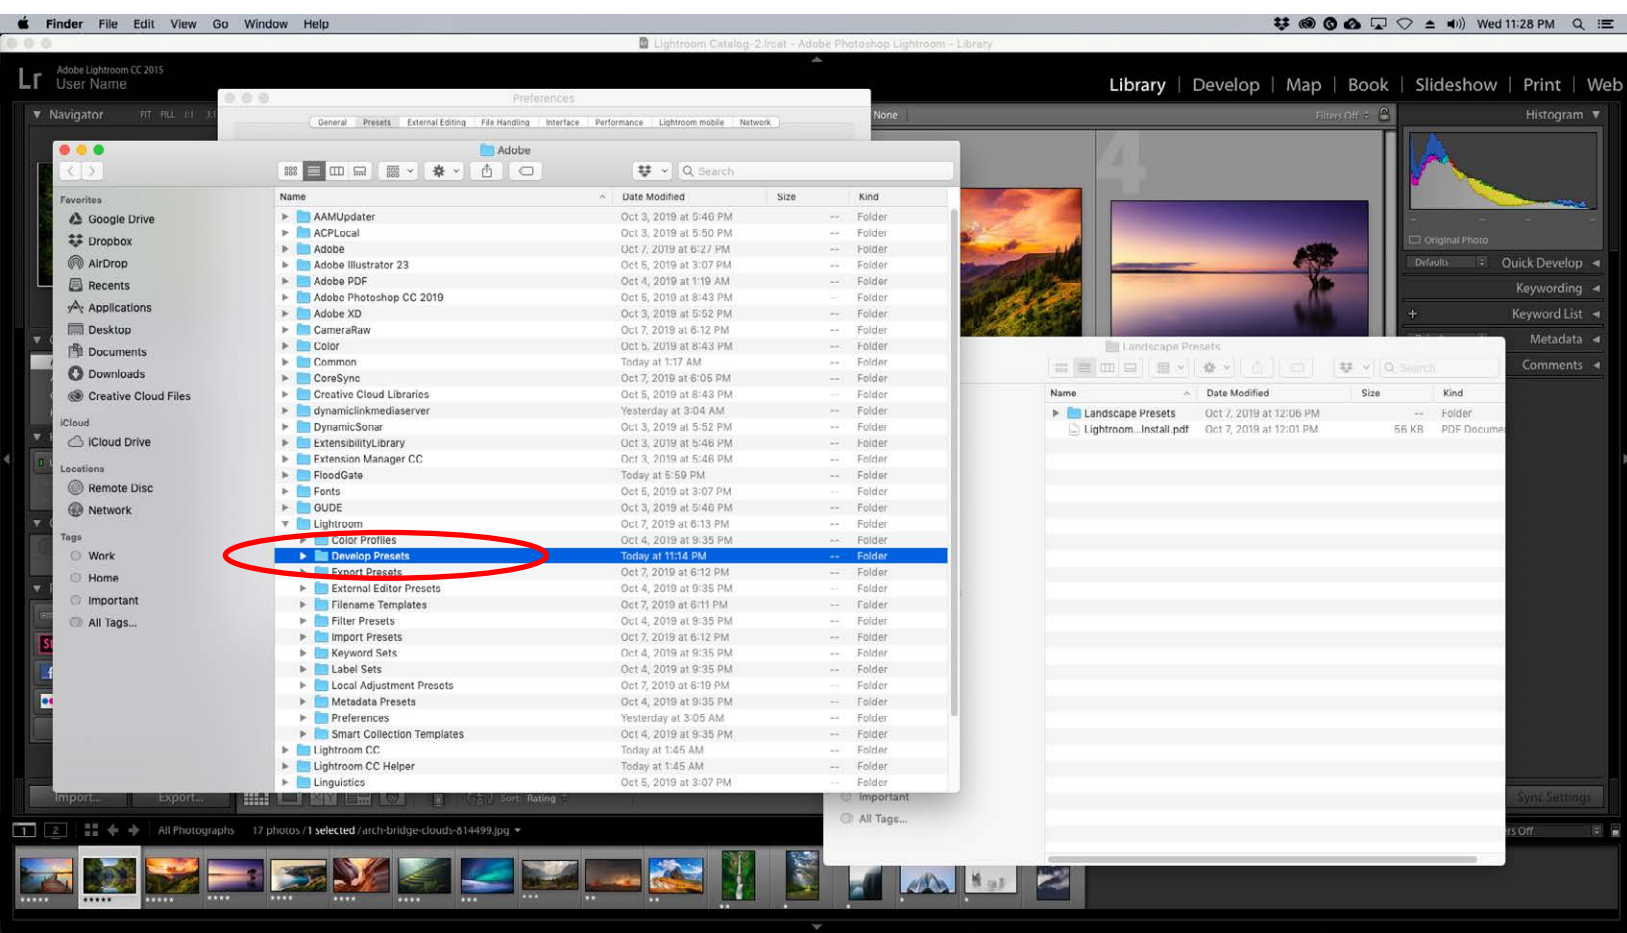

Choose the second tab called “Presets”

Click the ‘Show Lightroom Presets Folder’ button.
This will pop open the folder that contains all types of presets for Lightroom Classic.

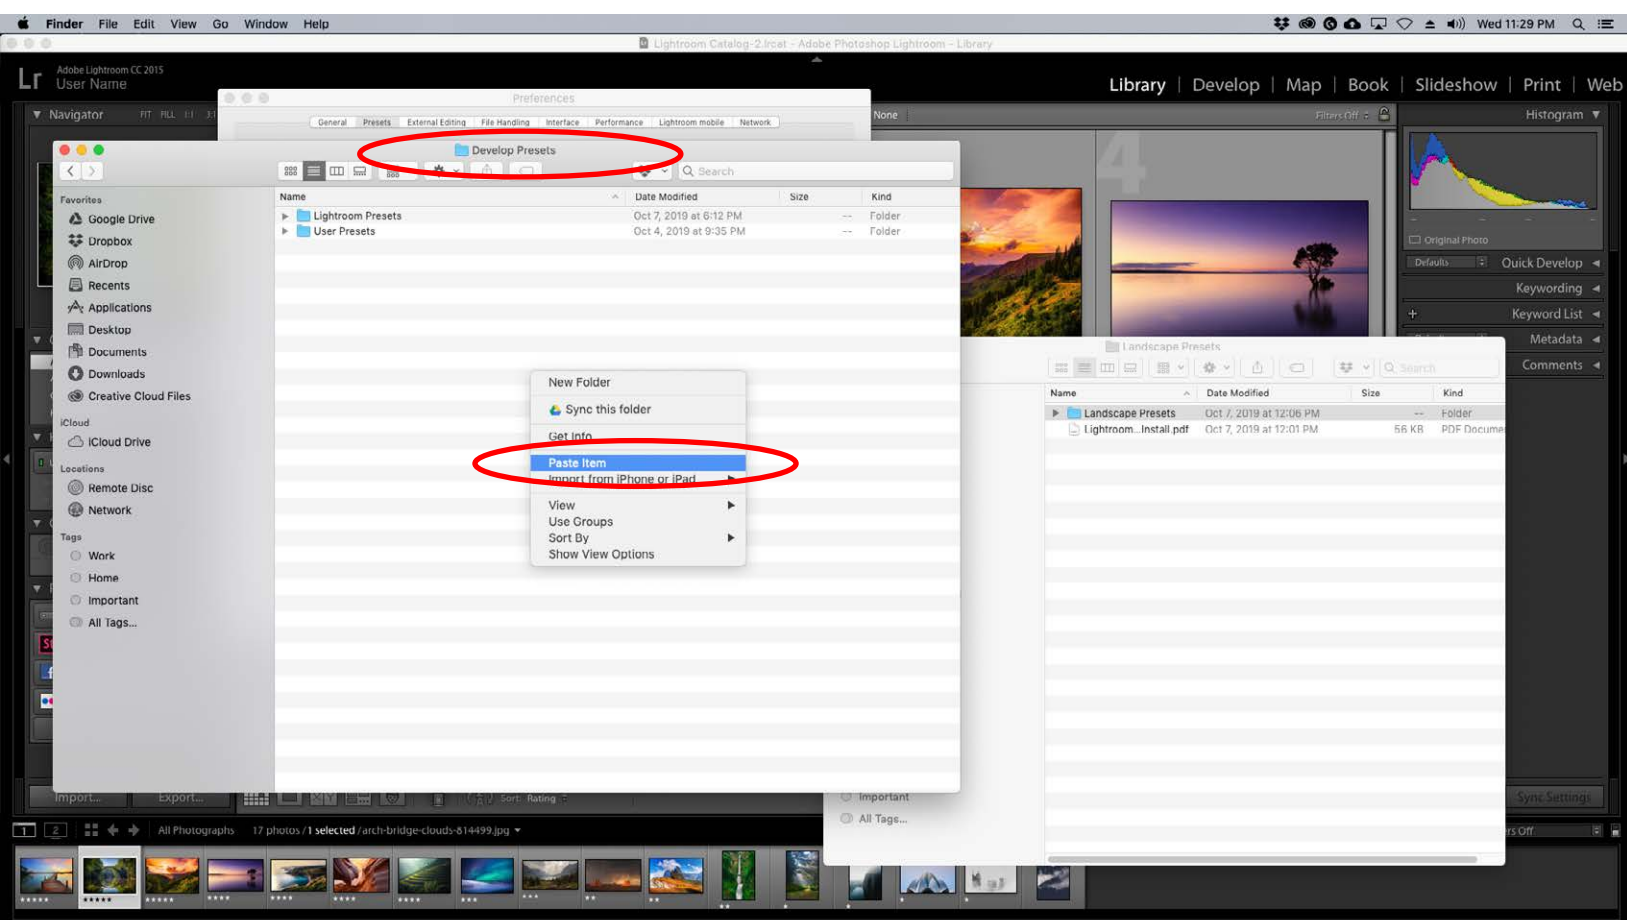

Find and open the 'Lightroom' folder, and then the 'Develop Presets' folder.

Find and open the 'Lightroom' folder, and then the 'Develop Presets' folder.

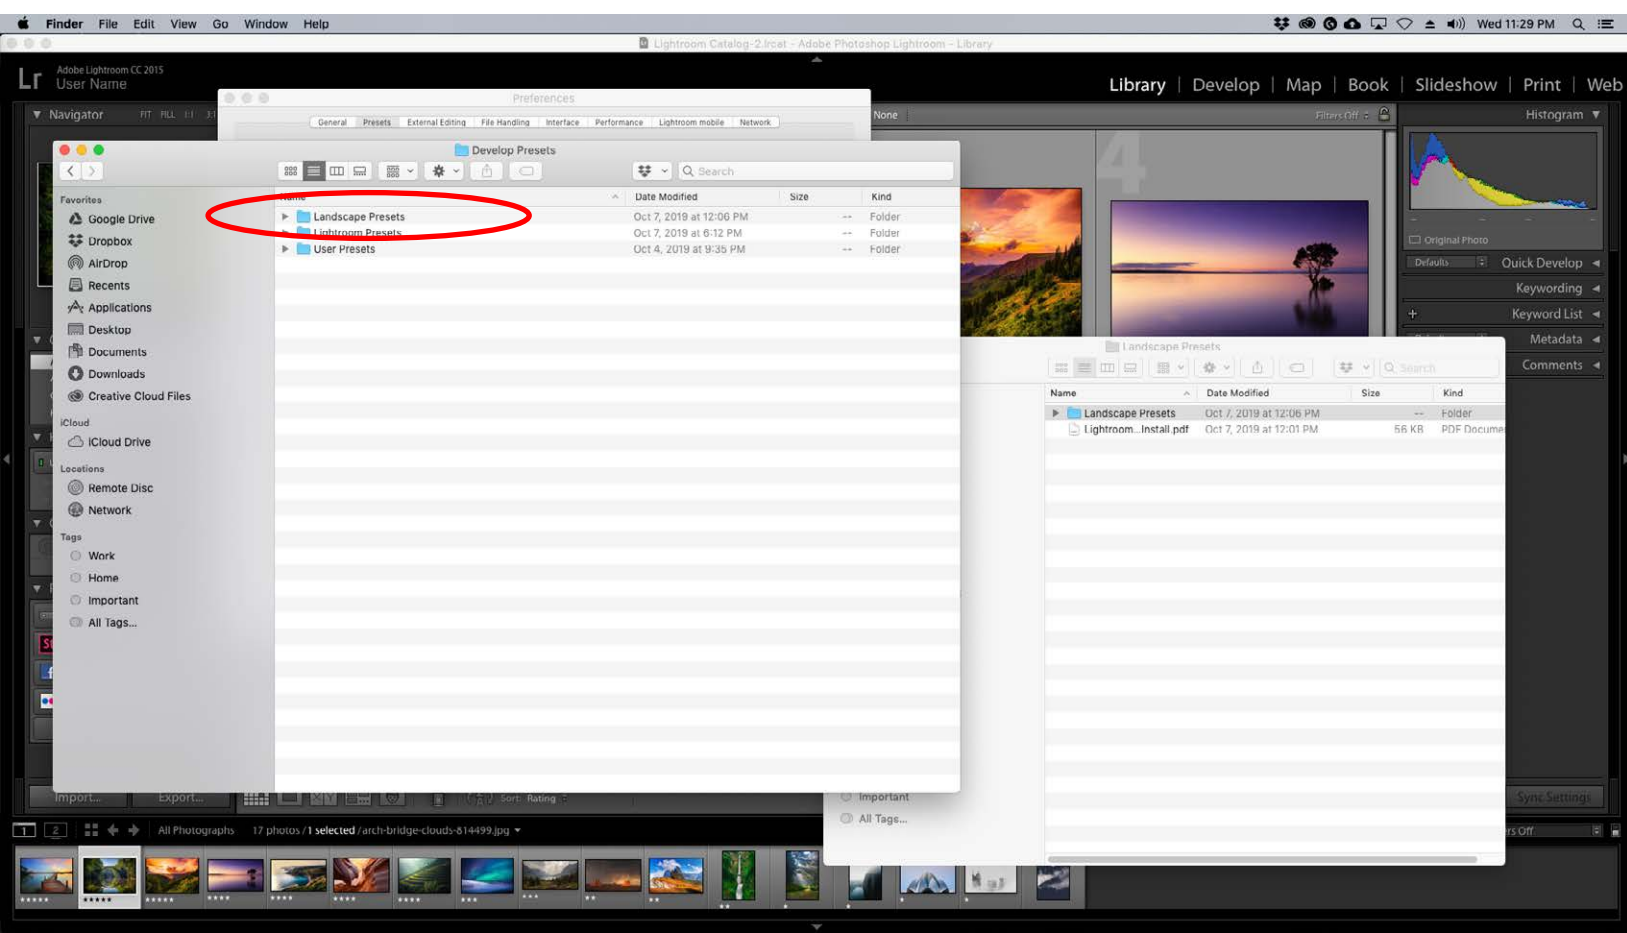

6. Paste the presets folder.

Paste the folder from step 2 into the Develop Presets folder.

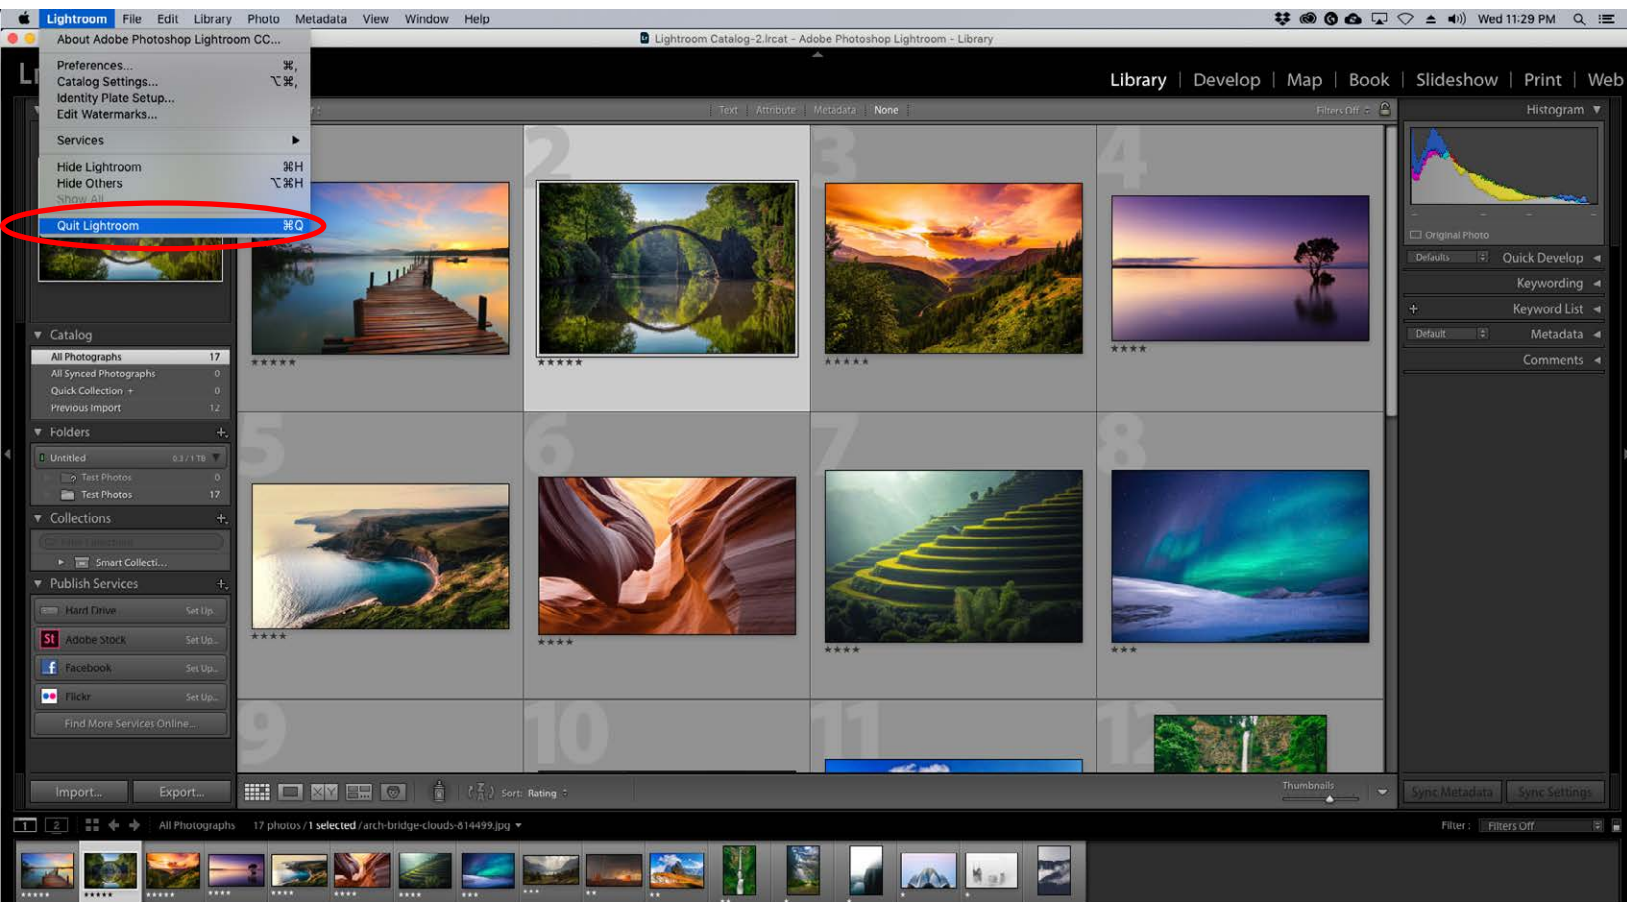

7. Presets are copied.

Your 'Develop Presets' folder should now contain the presets you are installing.

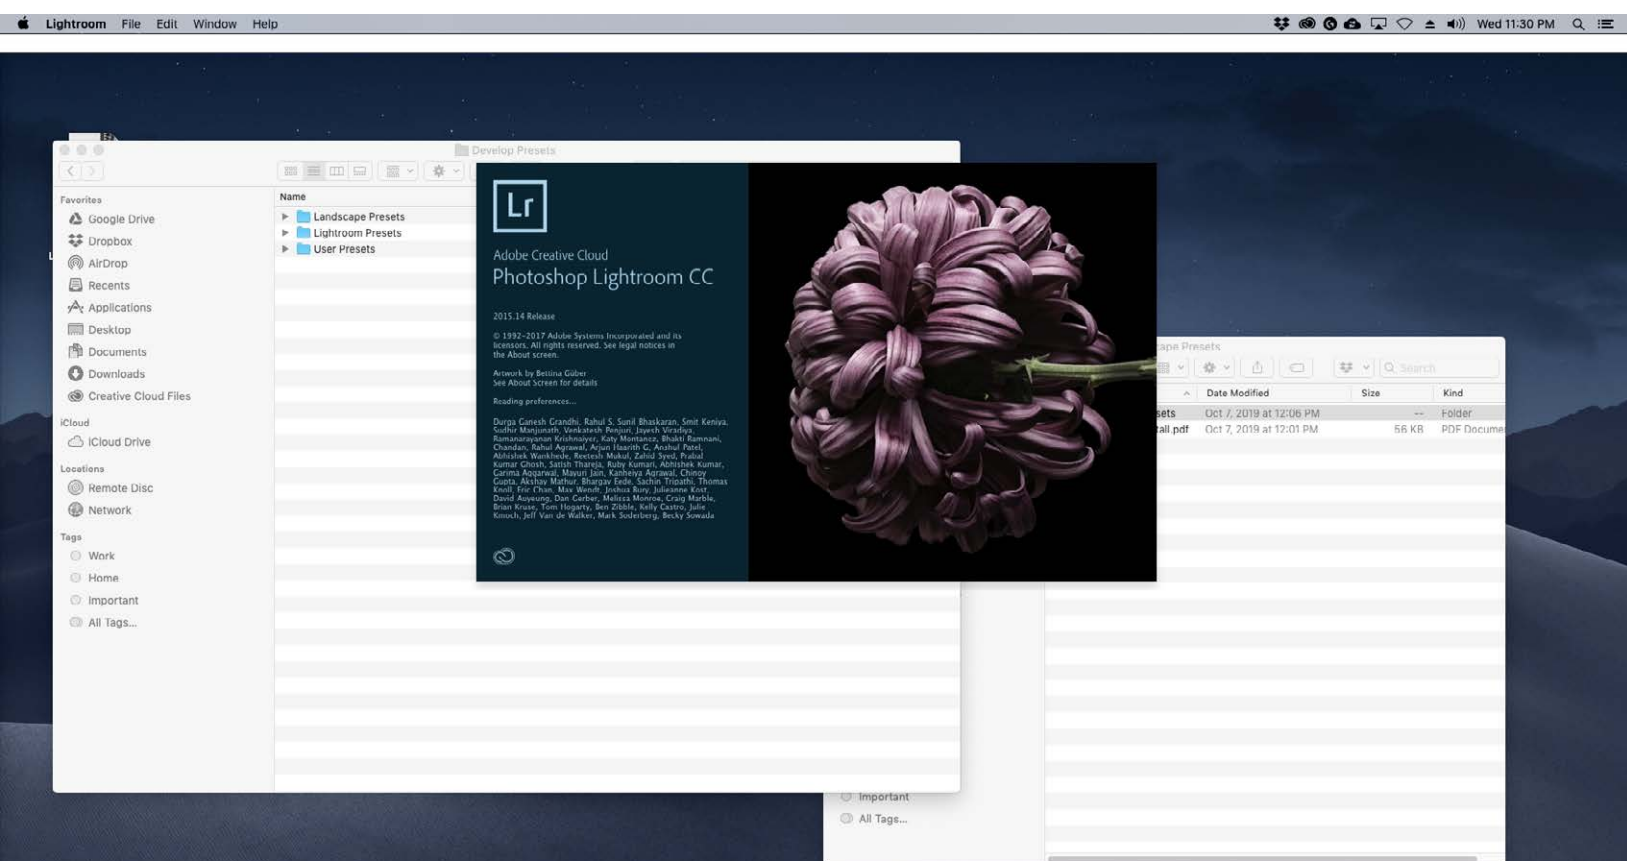

8. Close Lightroom

Quit Lightroom Classic by selecting 'Quit Lightroom' from the top menu bar.

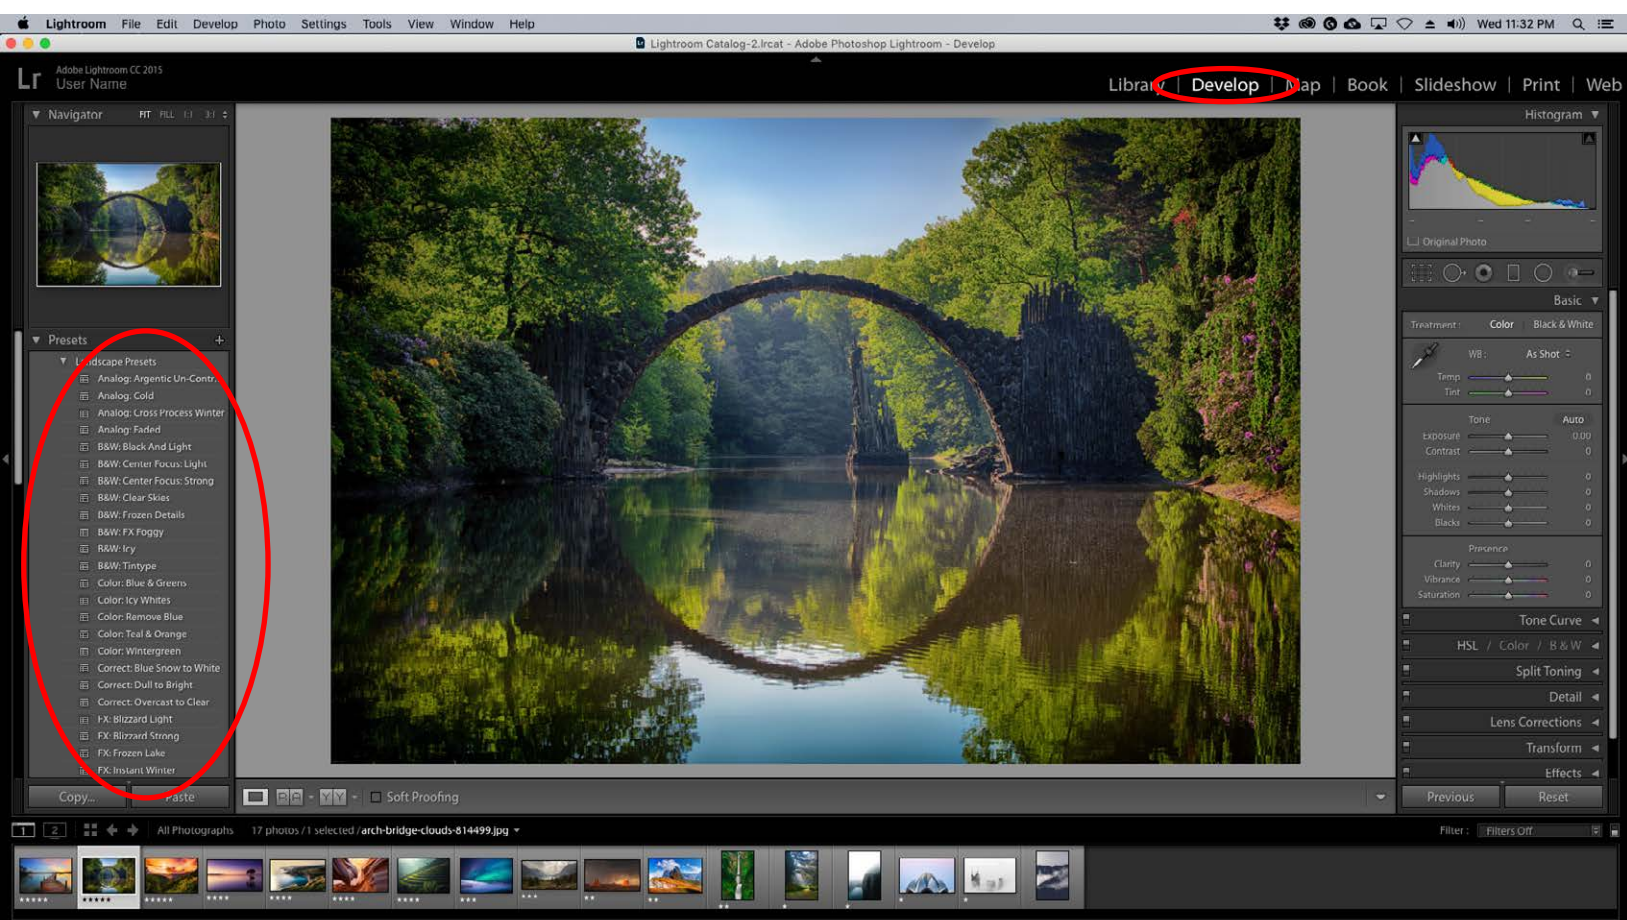

9. Open Lightroom

Open Lightroom Classic as you normally would.

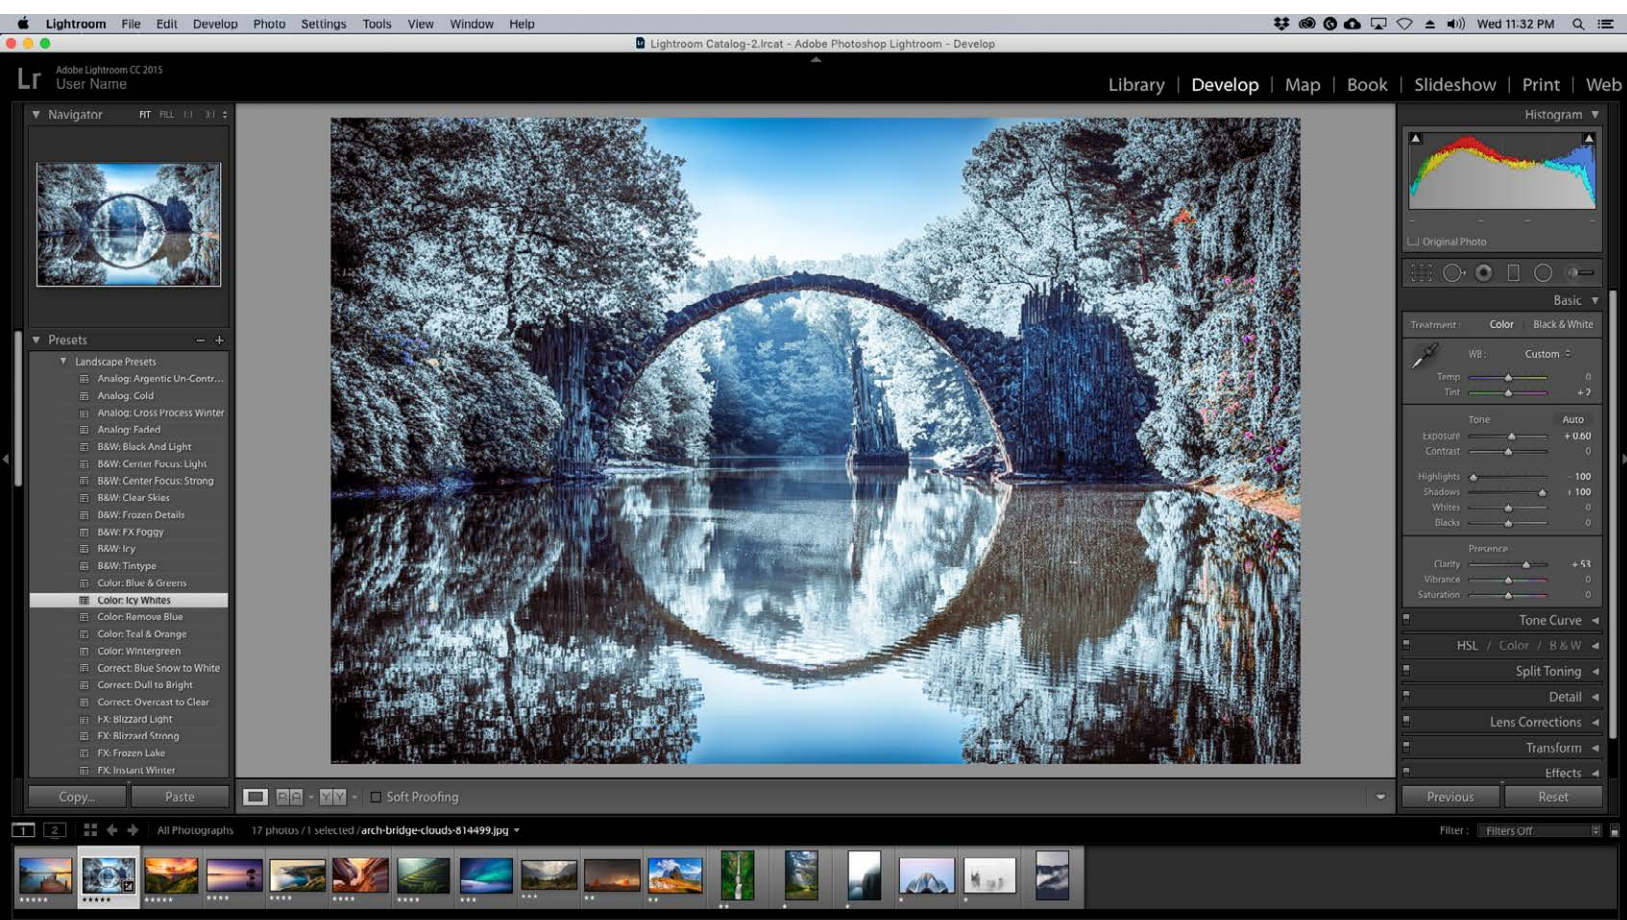

10. Go to Develop

Your presets are now available in the left panel in the Develop Module.

11. Presets are now installed.

Select a preset from the left menu to try out a look or simply hover them for a preview of the final result.

Enjoy!
