# How to Install
Lightroom Profiles

Lightroom Classic
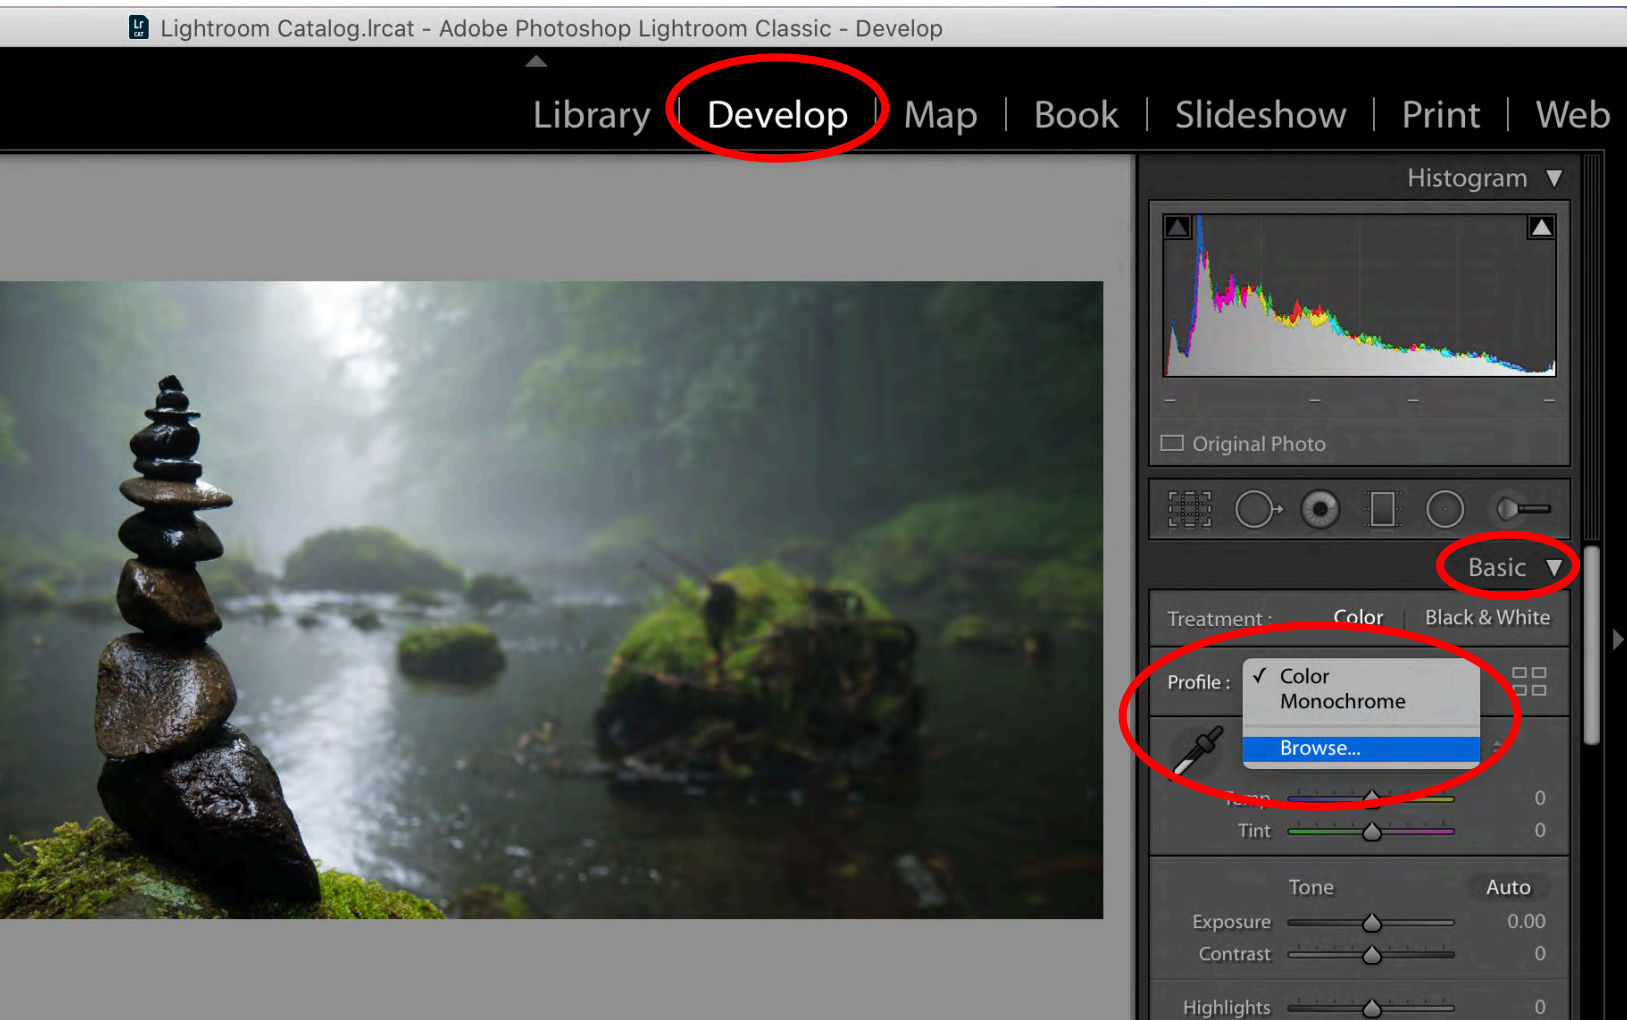

versions 7.5 +

1. Prepare your profiles folder

Download and unzip your profiles folder.

2. Prepare Lightroom for import

Launch Lightroom as your normally would and open an image.

Under the **Basic** section, click the **Profile** dropdown menu and select **Browse**.
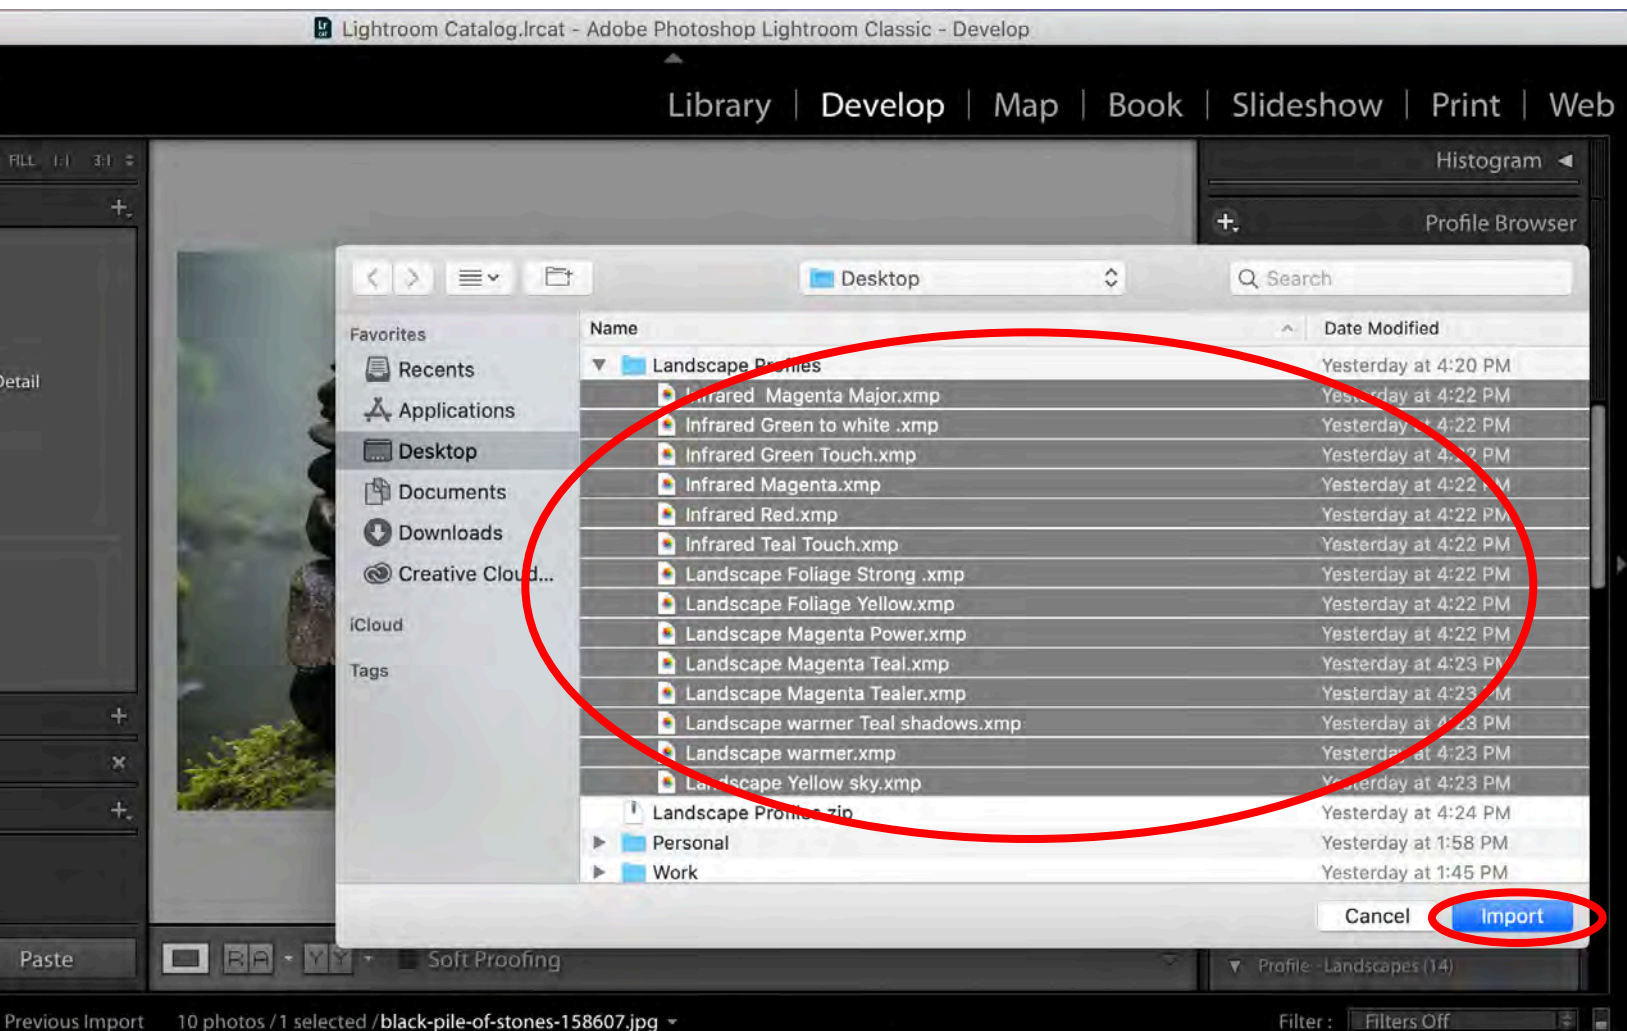

3. Import your profiles

From the Profiles menu, click the "+" icon and select **Import Profiles**.

4. Select your profiles

Expand the unzipped folder containing your presets, select the profiles and click **Import**.
5. Find your imported profiles

Back in the Profiles menu, locate the name of the folder you just imported and expand it to reveal the profiles.
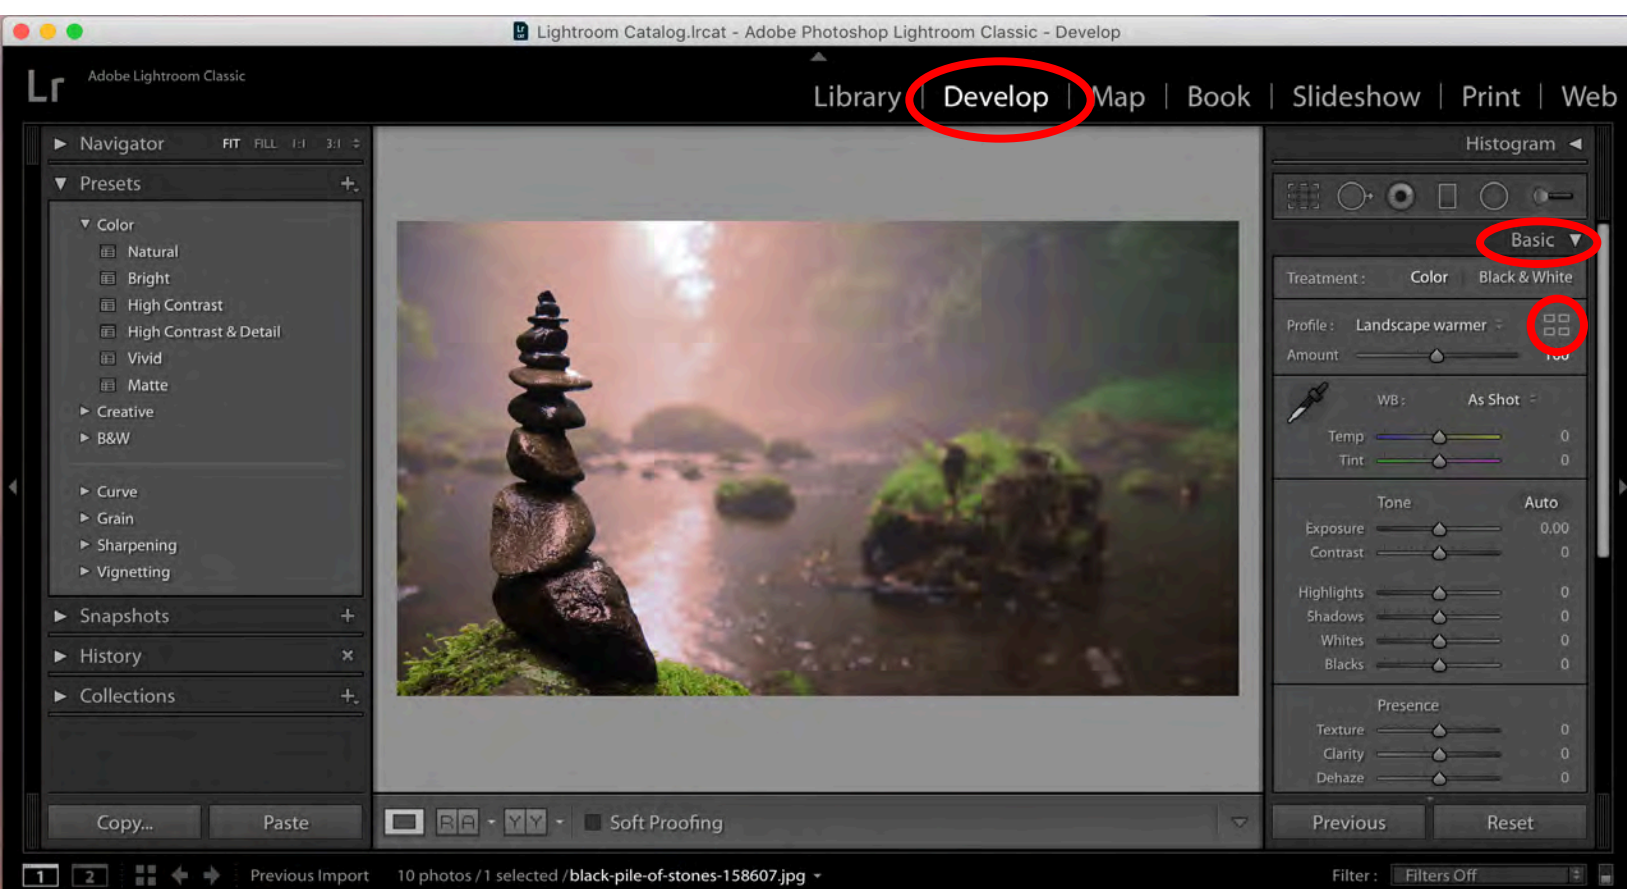

6. Hover & Select

Simply place your cursor over each of the profiles for a preview of the effect. Click a profile to apply it to the image.

7. Try any profile with any photo!

At any point you can return to the Profile menu to choose a different profile or set it back to it's original, even after making Lightroom adjustments and applying presets.

From the panel on the right while in **Develop** mode, expand the **Basic** menu and click the **Profile Browser** icon.

Enjoy!
