How to Install
Presets in Lightroom CC

Lightroom CC

all versions

# A Note for Lightroom Mobile Users

Lr

Mobile

This tutorial will guide you through the desktop installation *then* the mobile sync.

It is recommended to first install presets on desktop and *then* sync with mobile.

1. Prepare your presets folder

Download and unzip your presets folder.

2. Open Lightroom
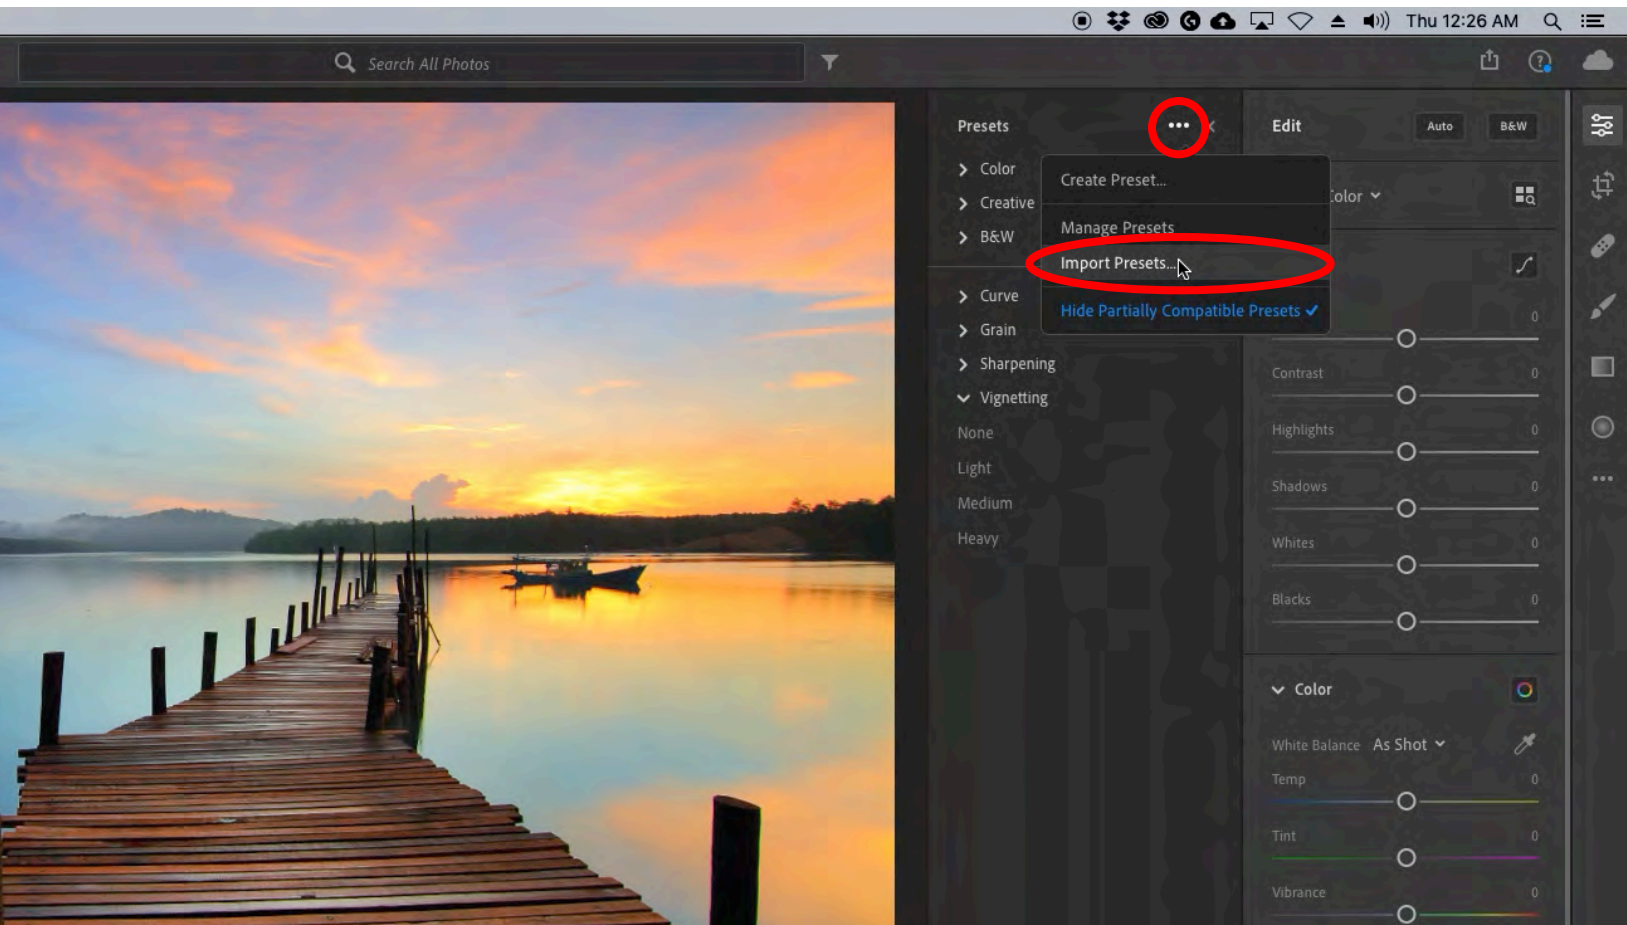

Launch Lightroom as your normally would.

3. Go to Edit and Click Presets

Go to the **Edit** section of Lightroom and click the **Presets** button at the bottom of the panel.

4. Click the "More" icon (...)

In the Presets section of the edit panel, click the **three dots (...)** then select **Import Presets**.
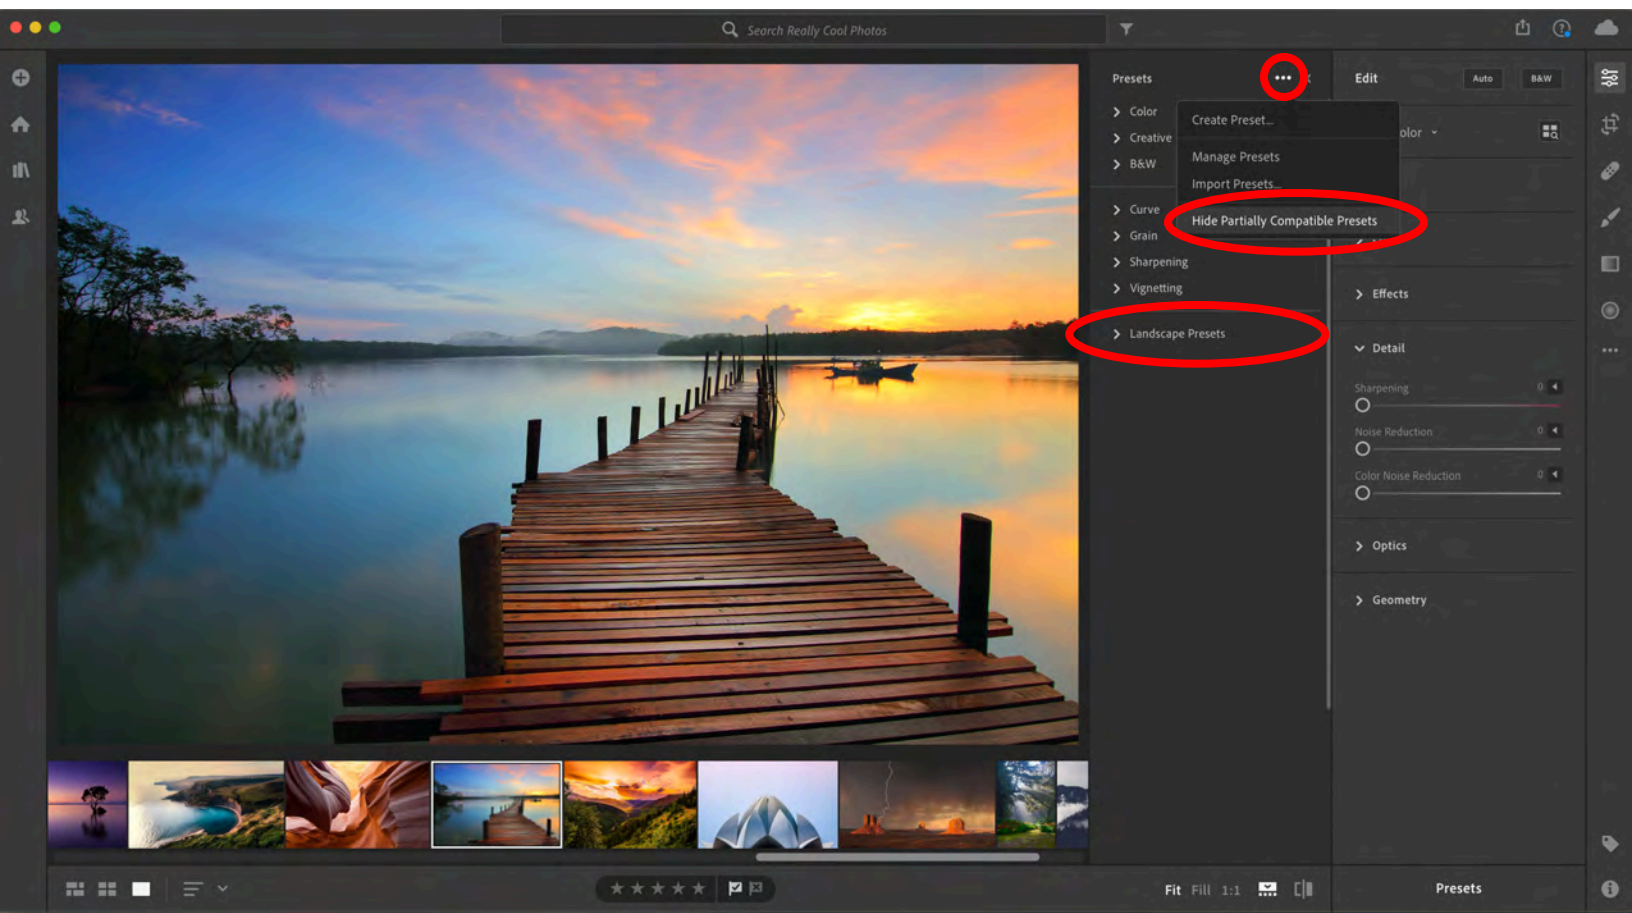

5. Import the XMP Zip file

Inside the zip file for the presets you purchased, there will be another zip file that contains the letters **XMP.** Select that zip file and click **Import**.
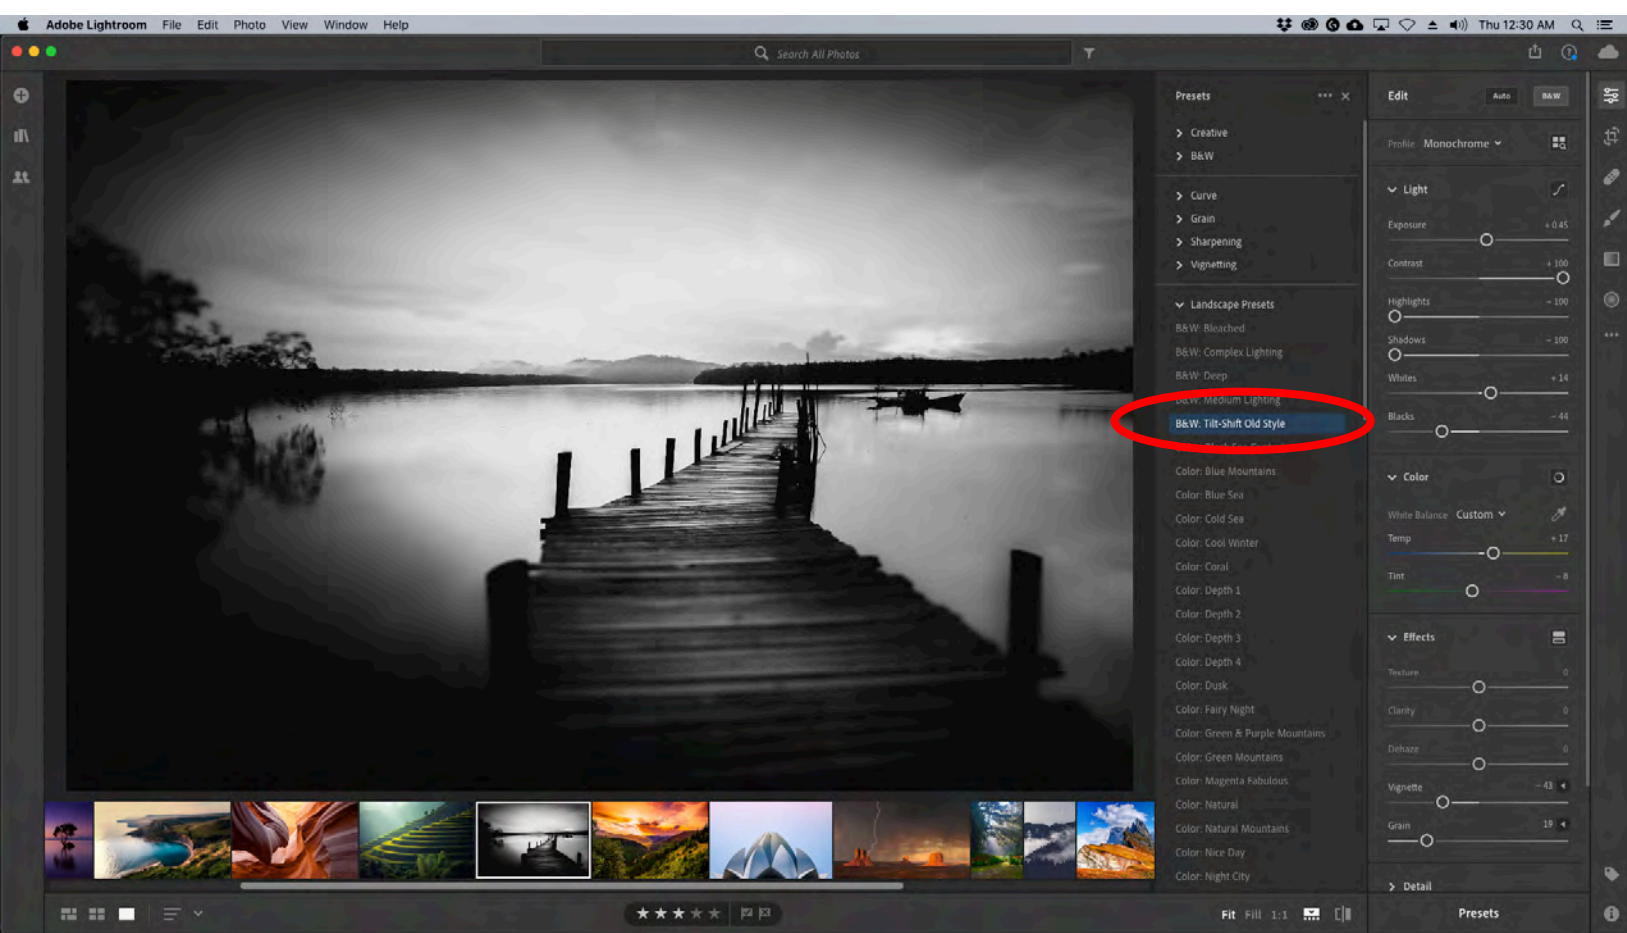

6. Presets are ready!

Your presets are now installed and you can start using them from the Presets panel.

Note: Some presets may be hidden by default. To reveal them, click the **"More" (...)** button at the top of the Presets panel, then uncheck **Hide Partially Compatibile Presets**.
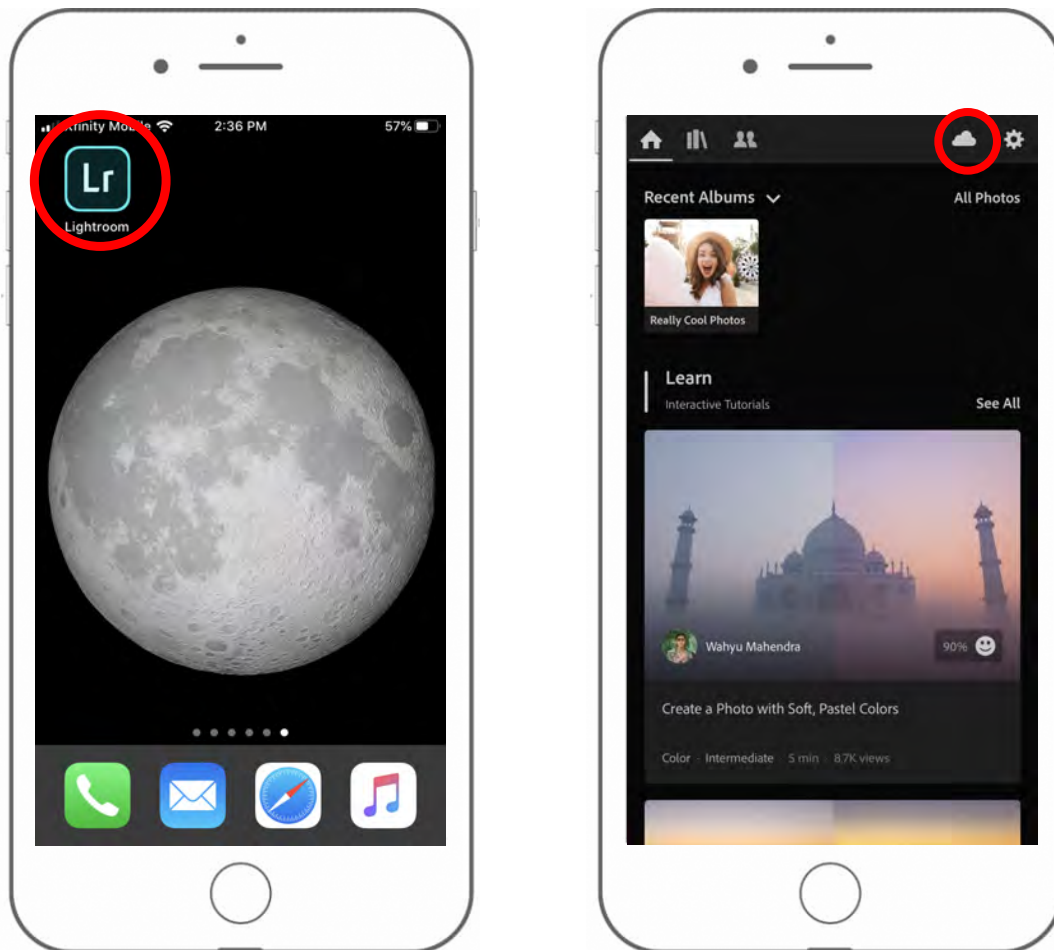

7. Try them out

Select a preset from the Presets menu to try out a look or simply hover over them for a preview.

8. Sync Lightroom Mobile (optional)

If you're using Lightroom with a subscription, you can use your new presets on the Lightroom Mobile app.
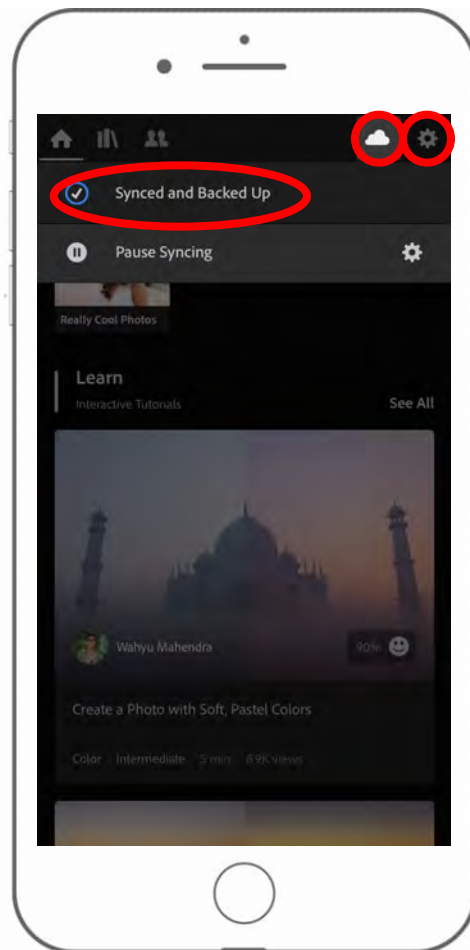

Launch your Lightroom Mobile app from your device. From the top menu bar, click the **Cloud icon.**

9. Make sure you're syncing

Ensure you have syncing enabled. If you do, the top of the cloud menu will say **Synced and Backed Up.**

If you are not syncing, make sure you are signed in by tapping **Settings** (gear icon) from the top menu bar.

10. Start editing

From the top menu bar, tap **Library** (books icon) and select a photo.

Slide the bottom tool bar all the way to the left then tap **Presets**.
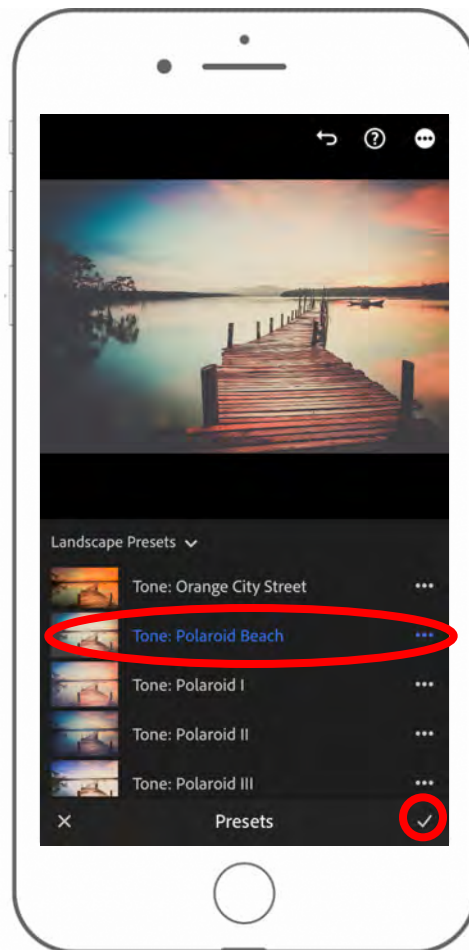

11. Find your presets

Lightroom automatically opens the preset you last used. Minimize this by tapping the arrow next to the folder.

Tap the presets you'd like to use.

12. Use your presets

Tap the preset to apply it to your image! Tap the checkmark to save it.

Enjoy!
